Release mespas R5.13

MESPAS AG is happy to announce the successful release of version 5.13 of its fleet management software mespasR5. With more than 80 new functionalities and modifications, this upgrade is the most complex and largest ever released by MESPAS. It contains enhancements and innovations to benefit the operational as well as the management side of a shipping company's business. For information, contact gino.fiore@mespas.com.

Two new innovations: *the mespas Cube...*

Concurrently with release 5.13, all vessels working with the MESPAS software have been provided with the new mespas Cube. The *mespas Cube* is a small offshore server installed aboard the ship. It acts as the hub between the vessel's PCs and the central database ashore. With the Cube, the software can be run on multiple PCs on board the ship, without impinging on the software's ability to synchronize and work with the central database ashore. Everything's pre-configured; no IT knowledge or intervention is needed by the crew to ensure the safe and robust running of the software system.

...and the mespas Reporting Engine

Ship owners and ship managers require accurate and timely information on the performance of their fleet as the basis for informed decisions. The new *mespas Reporting Engine* allows to run overviews, comparisons and analyses on single vessel level as well as across products or even the entire fleet. The huge amount of data that is recorded and documented every day can be analyzed and made available to relevant internal and external stakeholders.

Tito Vinci joins the MESPAS sales team

On 1 January 2011, Tito Vinci joined MESPAS as Area Sales Manager. Mr. Vinci is responsible for sales activities predominantly in Southern Europe and the Middle East. He will also manage and develop business relationships with MESPAS agencies in these respective countries. Having previously worked in various sales positions - representing internationally renowned companies in turbo systems and marine gear manufacturing - Tito Vinci has gathered vast experience in the marine industry.
